

Subject: KEMROKTM CEMENT UP FOR INTERNATIONAL CORROSION AWARD

CERATECH Inc's KEMROKTM cement has been nominated for *MP Reader's Choice Corrosion of the Year Awards* program. This first-of-its-kind award is spearheaded by NACE International, The Corrosion Society's 25,000 member strong organization. The award showcases groundbreaking technological innovations for corrosion mitigation. To vote for KEMROKTM, go to www.nace.org/MPReadersChoice. A brief summary and full description of all the nominated technologies are available, but the deadline for voting ends February 15th, 2012.

Maintenance managers of petrochemical facilities have reported much greater durability, higher corrosion resistance with KEMROKTM, and are projecting a significant reduction in maintenance shutdowns as shown in this before and after photo:

**Deteriorated Portland Cement
Concrete Sulfur Trench**

**NEW KEMROK Cement
Concrete Sulfur Trench**

**KEMROK Cement Concrete Sulfur
Trench After 2 Years of Service
(No Degradation)**

KEMROKTM's improved corrosion resistance results in a life cycle that is 2-3 times greater than conventional portland products. All CERATECH cements consist of 95% recycled coal ash and 5% renewable materials, and are virtually carbon-neutral.

CERATECH cements are available as both a bulk cement and as packaged concrete repair mixes. More information about CERATECH and their products can be found at www.CERATECHinc.com and www.KEMROK.com.

If you would like to discuss your new construction or maintenance and repair project, we invite you to contact Shelly Dvorak at (443) 524-4412 or email Shelly.Dvorak@ceratechinc.com.
